- 9. The refined lactose crystals are separated from the refined mother liquor
- 10. The refined lactose crystals are dried on a fluid bed dryer
- 11. The dried lactose is milled to the desired mesh size and passes a 500 µm screen.
- 12. Before storage in silos the lactose crystals pass a magnet
- 13. Just before packaging the product passes a 2000 µm screen and a magnet.
- 14. The product is packed in a multilayer paper bag with EVOH/polyethylene inner bag or big bags. Every packing is identified with product name, batch number, production date and expiry date.
- 15. Before palletizing every 25 kg paper bag is checked with a metal detector. Sensitivity of the metal detector: Ferrous 1,5 mm, non-ferrous 2,0 mm.
